Subject: CCR Proposed Decision: Clifty Creek
Attachments: Clifty Creek Proposed Decision 1.11.22.pdf

Hello,

Today, on January 11, 2022, the U.S. Environmental Protection Agency (EPA) issued decisions on several actions related to the coal combustion residuals (CCR) Part A demonstrations. EPA reviewed the Part A alternative closure demonstrations and determined that the demonstration submitted by Indiana Kentucky Electric Corporation (IKEC) for Clifty Creek Power Plant is complete.

Further, EPA has issued a proposed determination to deny the requested alternative closure deadline for both the West Boiler Slag Pond and the Landfill Runoff Collection Pond. Therefore, EPA is proposing a new date for Clifty Creek to cease placement of waste into the CCR surface impoundments. Attached is a copy of the proposed determination.

EPA has established a docket for this determination: Docket ID No. EPA-HQ- OLEM-2021-0587. The public comment period for the proposal is 30 days starting on January 25, 2022 and ending on February 23, 2022.

For further information on the individual determinations and how to comment, please see the [CCR Part A implementation web page](#).

For more information about the Part A and other CCR actions taken today, including notifying multiple facilities about compliance issues and laying out plans for future regulatory actions, please [read the Agency's press release](#).

If you have any questions, please contact Kirsten Hillyer at Hillyer.Kirsten@epa.gov or (202) 566-0542.
